DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Linehan, US Patent No. 6,327,578.

Linehan teaches a four-party credit/debit payment protocol comprising: a consumer's computer 202 a start message 220 over an internet network to a merchant's computer 204, the merchant's computer 204 then replies to the consumer's computer 202 with a merchant message 222 including a wallet initiation message, a merchant digital signature, and a digital certificate from an acquiring bank 208; the wallet initiation message includes a payment amount, an order description, a timestamp, and a nonce; starting a consumer's wallet program in the consumer's computer 202 in response to the wallet initiation message; the consumer's computer 202 then sends a message 224 over the internet network including some consumer identity and authentication information, such as a userid and user password, plus the merchant message, to an issuer gateway 214 operating on behalf of an issuing bank 212; the issuer gateway 214 verifies the merchant's signature to prove that the consumer is dealing with the actual merchant

and validates the merchant's certificate and the acquirer's certificate to prove that the merchant and issuer share a common financial arrangement; the issuer gateway 214 then verifies that the consumer's account is active and has sufficient funds and/or credit to support the payment amount; the issuer gateway 214 then pre-authorizes payment by sending over the internet network an authorization token 254 over path 226, an issuer's digital certificate, the wallet initiation message, and a reference number or value 252' representing the consumer's credit or debit card number; the issuer gateway 214 signs the authorization token 254 on behalf of the issuing bank 212; the merchant 204 verifies the issuer's signature, issuer's digital certificate, and authorization token contents to validate that the payment is authorized by the issuer 212; the merchant 204 sends a capture request message 256 over path 242, including the reference number 252' representing the consumer's card number, over the internet to an acquirer gateway 206 operating on behalf of an acquirer bank 208, to capture the transaction and get paid; the acquiring bank 208 will settle accounts with the issuing bank 212 over a private network, by sending a settlement message 258 that includes the reference number 252' to the consumer's card number (see col. 5, line 50 to col. 3; figs. 1-3).
